

SOLOMON KOK NANLEEB

AI/ML Engineer | Data Analyst | CS Student @ UMAT Ghana | Es-snanleeb9424@st.umat.edu.gh | 0248009643 | [LinkedIn](#) | [GitHub](#) | [my portfolio](#)

EDUCATION

BSc Computer Science & Engineering Tarkwa, Ghana

University of Mines & Technology (UMAT) Expected: November 2028

Relevant Courses: Web Development | Computer Graphics | Linear Algebra | Calculus | Database Systems | Discrete Maths | Differential Equations | Maths Analysis | Introduction to Java | Introduction to programming with Python | object oriented Programming | Computer Architecture & Organization | communication skills | Academic Writing | Advance Database System

CERTIFICATIONS

Certificate in software Development (CSD)

GI-KACE: Ghana India Kofi Annan Centre of Excellence in ICT

Nov 2025

Modules: Software Engineering | HTML & CSS | JavaScript | Database Technologies | Python

Introduction to Artificial Intelligent ([IBM](#))

July 2026

Supervised Machine Learning: Regression and Classification ([DeepLearning.AI](#))

July 2026

TECHNICAL SKILLS

Languages: Python | Java | JavaScript | HTML & CSS | SQL

Libraries/ frameworks: NumPy | pandas | Scikit learn | Matplotlib

Tools: Git | GitHub | Google Colab | Jupyter Notebook | pgAdmin | MongoDB | Vs Code | Claude Code

PROJECTS

Titanic Data Analysis Dashboard (2026)

- Analyzed 891 real Titanic passengers using Python, Pandas and NumPy
- Tools: python, numpy, pandas, streamlit

Live: <https://titanic-data-analysis-dashboard-dkzepevrpzivukna24ibqd.streamlit.app>

Hospital Management System (2026)

- Manages patient records, appointments and billing with full database integration
- Tools: Python | SQL | phpMyAdmin | Vs code

Ghana Covid 19 Analysis (2026)

- Analyzes the rate at which Ghana was able to manage covid 19 as combined with the 54 African countries
- Compared all 54 African countries Ghana ranked #17 in cases with 2nd best death rate of 0.85%
- Tools: python | Numpy | pandas | streamlit

Live link: <https://ghana-covid-19-dashboard-solomon-kok-nanleeb.streamlit.app/>

Student Marketplace (2025)

- E-commerce platform connecting UMAT students to buy and sell items
- Tools: HTML | CSS | JavaScript | Php | Sql

Live link: [UMarket](#)

SMS Spam Classifier

- Developed and deployed and SMS spam classifier detection model trained on 5,572 messages, achieving 97.67% accuracy and 91.9% spam detection using TF-IDF and logistic Regression. Applied NLP preprocessing and balanced class weights to improve classification performance.
- Tools: Python, NLP, Streamlit and scikit-learn
- Live link: [SMS Spam Classifier](#)

Experience

Self-Directed AI/ML Research

2026 Present

- Independently studying Machine Learning through Andrew Ng's ML Specialization (DeepLearning.AI)
- Built and deployed 2 live AI data analysis applications accessible globally online
- Analyzed Ghana COVID-19 data across all 54 African countries revealing key health insights Applied ML concepts including Linear Regression, Logistic Regression, Feature Engineering and Gradient Descent to real world datasets
- Maintained active GitHub repository with consistent daily commits
